

Live 3D Model Service

At this very moment, API provides two ways of searching for models:

1. `live3dmodelservice.ubicomp oulu.fi/aika/oulu/api/city/address` – GET

Searches for buildings by street address.

Accepts two parameters:

- `street` [required] - Street name
- `number` - Building number

2. `live3dmodelservice.ubicomp oulu.fi/aika/oulu/api/city/geo` – GET

Find all buildings in requested circle area.

Accepts three parameters:

- `lat` [required] - Latitude of center in degrees
- `lng` [required] - Longitude of center in degrees
- `radius` [required] - Radius of search area in meters
